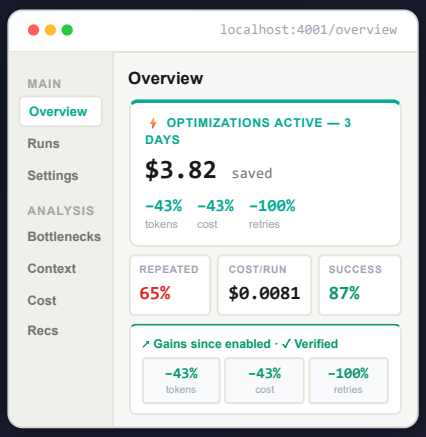
Agentium Agent Runtime Layer · Self-hosted **EARLY ACCESS**

Your coding agent is wasting money on every run.

Agentium shows you exactly where — cost, time, wasted tokens — then fixes it in one click. Free to observe. Pay only when you save.

-43%	65%	5 min	$0
TOKEN COST	AVG WASTED	TO INSTALL	TO OBSERVE
per run · verified	tokens re-sent	one command	free forever



⚠ THE PROBLEM TODAY

No visibility into costs

You see one monthly bill from your coding agent provider. No breakdown by run, no bottleneck map, no way to know what to fix.

Tokens wasted every call

65% of input tokens are identical every run — system prompt, tool definitions, repo summary — billed at full price each time.

Retry spirals drain budgets

Failed runs retry silently. No cap, no alert, no automatic stop. Costs multiply with every retry before you notice.

THE SOLUTION — FOUR PHASES, ONE PRODUCT

PHASE 1 · FREE

See it

Full dashboard — waterfall timeline, cost per run, bottleneck map, context inspector, ranked recommendations.

`Free forever`

PHASE 2 · PRO

Fix it

One-click context optimizer. Strips repeated context automatically. Proof card shows exact before/after delta — measured, not estimated.

`-43% tokens · verified`

PHASE 3 · TEAM

Control it

Budget Governor — set max cost per run and retry limits. Hooks automatically block runaway agents before costs spiral.

`Zero agent code changes`

PHASE 4 · ENTERPRISE

Remember it

Context Memory — local proxy caches stable context at 10× cheaper rates. Savings compound every run you make.

`$0.30/MTok vs $3.00/MTok`

HOW IT WORKS

1. **Install in 5 min** — One curl command. Docker installs automatically. Browser opens to your dashboard.
2. **Connect your agent** — Install hooks in your repo. Works with Claude Code and Codex. No code changes needed.
3. **Run normally** — Agentium captures every model call, tool call, token count, and cost in real time automatically.
4. **See gains instantly** — Flip toggles in Control Plane. Next run is optimized. Gains card shows verified before/after delta.

PRICING

OBSERVE	Always free	Full dashboard · unlimited traces · **no credit card**
PRO	Early access pricing	Context Optimizer · proof card per run · **gains dashboard**
TEAM	Early access pricing	Budget Governor · retry limits · **shared team rules**
ENTERPRISE	Contact us	Context Memory · 10× cache · **cost SLA**

INSTALL · MACOS & LINUX · UNDER 5 MINUTES

RUN THIS IN YOUR TERMINAL

```
curl -sSL https://agent-runtime-layer.vercel.app/instal
l.sh | bash
```

Auto-installs Docker if missing · opens dashboard automatically
